

Black Wolf

Real-time control
of information security

The danger of extremist online activity

The Internet is an open platform where radical ideas and recruitment into extremist communities spread.

Current monitoring tools are often unable to track activity in different online channels simultaneously, resulting in insufficient threat control.

A rapid and accurate system is needed to identify and analyse such threats.

Black Wolf – monitoring and analysing network activity

01.

Black Wolf searches online information (open sources, social networks, chat rooms) for extremist activity

02.

Analyses data based on patterns configured by the customer and produces real-time reports

03.

The system is customised to a specific region and language using artificial intelligence

Comprehensive threat detection and analysis

Multi-channel data collection:

The system analyses sources from public websites to social media and messenger chats.

Pattern-based analysis:

Uses customised patterns to identify extremist activity such as keywords, phrases and content types.

Real time reporting:

Automated reports that alert you to a possible threat as soon as activity is detected.

Key benefits

Real-time monitoring:

Black Wolf provides up-to-date reports, allowing you to respond to threats immediately

Customisation flexibility:

The system adapts to the customer's needs by tracking specific patterns and providing pinpoint control.

Localisation for any region:

Using AI to customise the product for any language and regional characteristics, increasing the accuracy of search and analysis.

Who is Black Wolf useful for?

TARGET AUDIENCE

State and government agencies involved in the control of public safety.

Security services and law enforcement agencies.

Organisations that need to track mentions of their activities in public channels.

USE CASES

Government structures:

Controlling the spread of extremist materials online.

Law enforcement:

Monitoring activity and identifying security threats.

Private companies:

Analysis and protection of reputation, prompt detection of threats.

Black Wolf's technological superiority
